

World Economic Indicator Analysis

- Data Set of World Economic Indicator from 2000-2012 was analyzed to figure out the factors contributing to the stability or dip in GDP of a Country
 - Analysis was done using Excel mostly with Pivot table
- As per the Analysis, America had the Highest GDP in the world and Africa has the least
 - Lending rate of Africa is highest which is major factor for lower GDP
- Tourism both Inbound and Outbound are less in Africa making it less favorite for tourist
- Life expectancy of Female and Male are less in Africa, Infant mortality rate and Average birth rate is high in Africa
 - No of days to start Business, Business tax rates, Ease of doing business, Hours to do tax, Internet and Mobile usage are poor in Africa which significantly results in lowering GDP of the country
- Hence it is important for Government and officials of the country to focus on the above mentioned factors to achieve stable GDP for the country
